

Manage PDF files, and incorporate digital signatures.

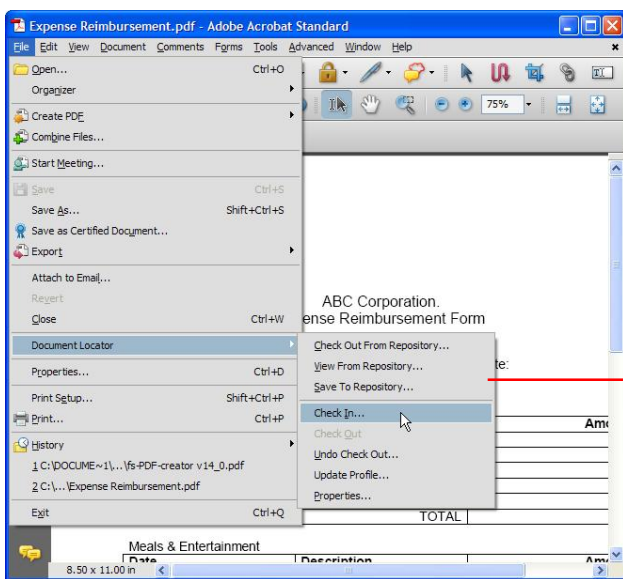

Integration with Adobe® Acrobat® extends your ability to manage PDF files within the document management system – including digital signatures, giving you access to the same menu commands from in Acrobat as you have in Microsoft Office applications.

- § Perform the most common document management commands from within Adobe Acrobat and Adobe® Reader®.
- § Add digital signatures, backed by Adobe's PKI (public key infrastructure) support, to verify the signer's digital identity and to be assured that content has not been altered.
- § Improve team collaboration. Take advantage of Acrobat's comment and mark-up tools, and easily version PDF files, even those that don't have non-PDF source files.

Functionality where you need it, in the software you already have.

Adobe Acrobat is well known and used by millions worldwide to create, view, and share PDF files. Document Locator integration gives you the ability to perform document management functions right from within Acrobat Standard, Professional, or Adobe Reader v. 8.0 or higher:

- § Save a PDF file directly to Document Locator.
- § Check in, check out, and undo a checkout for a PDF file.
- § Update Profiles, version notes, descriptions, and other document properties.

The Document Locator menu is added to the Adobe Acrobat and Reader File menus.

Benefits

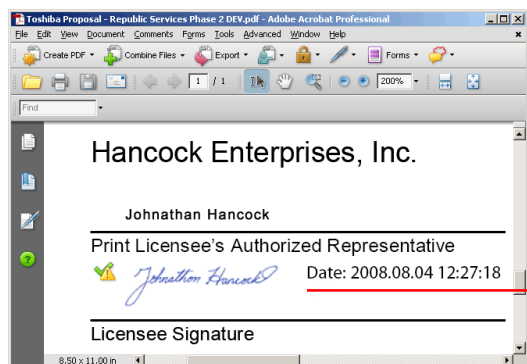

- Access within Acrobat – Access common Document Locator commands such as saving to the repository, viewing files, and checking out files from within Adobe Acrobat and Adobe Reader.
- Versioned PDF files for collaboration – Improve collaboration by being able to mark up and share PDF files easily, and to version PDF drafts.
- Enforced document check-in – Prompt users to check in PDF documents when closed from Acrobat or Reader.

Solutions

- Comprehensive system – Integrates Adobe Acrobat within a full enterprise document management system to manage all PDF documents across the enterprise.
- Digital Signatures – Incorporates Adobe's digital signature capability within document management system.
- Collaboration – Share secure documents with contractors, vendors, customers, and others.
- IT – Leverage existing software with added document and records management capabilities.

Incorporate Digital Signatures for added security.

Adobe's encryption technology and public key infrastructure (PKI) support allows you to incorporate digital signatures in documents managed within Document Locator. This added level of security raises confidence that document content has not been altered, and verifies the digital identity of the document signer.

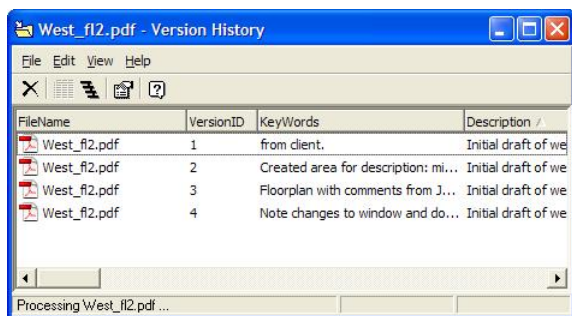

Adding a digital signature to Adobe PDFs in Document Locator increases everyone's confidence that document content has not been altered, and that the person who signed the document really is who they claim to be.

Enhance collaboration with flexible PDF files.

PDF files are virtually platform-independent, which makes them ideal for collaboration.

- § Collaborate on documents that do not have non-PDF source files, knowing that all edits and comments will be captured and preserved in Document Locator.
- § View a document's version history, including version notes, in the Version History window.

In this example, the original source document is a PDF file. Subsequent changes to the document are all done in Acrobat and versioned automatically in Document Locator.

- § Find PDF documents in seconds using Document Locator's comprehensive search tools. PDF documents are automatically full-text indexed when saved to Document Locator so you can search on their content in addition to other search criteria.
- § Request approval for PDF files just as you do with files in other formats.
- § Combine Acrobat's security features with Document Locator security to protect PDF documents from being altered, printed, copied, or accessed, and to create an audit trail of document versioning.

Protect source files from alteration by restricting users from viewing any version but the final, approved PDF version.

Related Features

- PDF Creator – Users without Adobe Acrobat can create robust PDF documents automatically on import or check-in.
- Microsoft Integration – Keep people working in a familiar environment.
- AutoCAD Integration – Access common Document Locator commands such as saving, viewing, and checking out files from within AutoCAD.
- Brava! Markup Module – View and mark up files with overlays while preserving the original document.
- Check-out and Check-in – Prevent loss of data and unnecessary multiple copies of documents.
- Document Profiles – Attach descriptive metadata to imported documents, making them easier to categorize, store, and retrieve.
- Folder Properties – Use folder properties to organize and control the formatting of documents imported to them.
- Importing Documents – Easily import hundreds of documents including PDF files.
- Searching – Locate documents instantly using sophisticated search tools.
