

DL Mobile takes your office on the go.

Version 6.3 | Release Innovations

Innovations in the third major release of the year bring new mobile access for users and easier user management by system administrators.

DL Mobile for phones and tablets

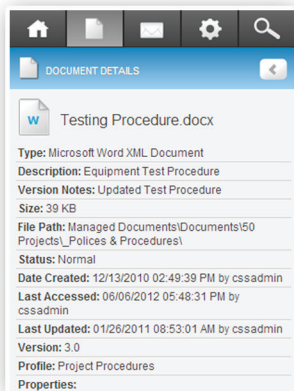

Employees, vendors, customers, and anyone you authorize with WebTools access can now use Document Locator on Mobile devices!

DL Mobile is a new mobile Web interface in version 6.3 engineered for smart phones and tablets. Developed in the latest HTML5 technology, it works on most mobile systems, including iPhone, iPad, Android, Windows Phone, and the latest generations of BlackBerry.

As a component of WebTools, DL Mobile is a self-hosted option that expands remote access capabilities while leaving you in full control of repositories managed on-site at your location. It offers the most popular features of document management found in the desktop and browser in a new Mobile-optimized interface.

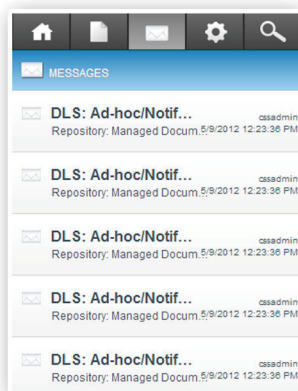

Features of DL Mobile

- Open and view files
- Search file content and use saved searches
- Send and receive notifications
- Participate in workflows

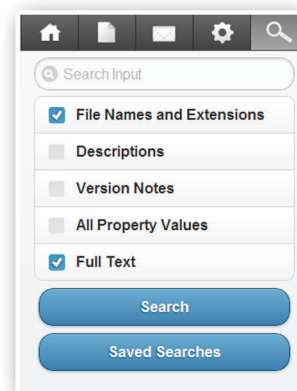

Document Details

View documents, PDF's, emails, and more.

Messages

Receive messages and approve workflows.

Search

Search file content and metadata values.

Enhancements in v6.3

- **DL Mobile**
Access document management on mobile devices and tablets.
- **Active Directory Sync Tool**
Synchronize Active Directory with document management repositories.

Upgrades are available at no additional charge while on Support and Maintenance

All New Active Directory Sync Tool with Groups

Administrators have new options for managing user accounts in Document Locator using the new Active Directory Sync Tool that is re-engineered from the ground up in version 6.3.

The Active Directory Sync Tool automates the synchronization of Active Directory accounts with selected repositories in the document management system. It provides harmonization of both network security users and groups between Active Directory and Document Locator.

Among the significant improvements in the new tool is that it synchronizes Active Directory Groups with Microsoft SQL Server, eliminating the overhead of individual SQL login accounts.

Features of the Active Directory Sync Tool

- Synchronize Microsoft Active Directory Groups with SQL Server and Document Locator
- Create Active Directory users associated with groups in Document Locator
- Disable or remove Active Directory Users from Document Locator that are no longer enabled or have been removed from Active Directory
- Schedule synchronization of Active Directory using Windows Task Scheduler
- Send synchronization reports via email
- Set synchronization thresholds to limit changes
