

Installing Microsoft iFilter with Office 2003

Step 1

Locate your Office 2003 installation media and insert it into the system. The system will initiate the installation program.

Step 2

When prompted to select the installation type, choose custom. Deselect all the listed application and choose the option 'Choose advanced customization of applications' to continue (**Figure 1**).

Figure 1

Step 3

When prompted to specify the features to install, scroll down to the 'Office Tools' section and locate 'Microsoft Office Document Imaging'. You must expand the 'Microsoft Office Document Imaging' and enable the 'Scanning, OCR and Indexing Service iFilter'. Alternately, you may enable the 'Microsoft Office Document Imaging' application (**Figure 2**).

Step 4

Once you make the necessary selection, you may continue to complete the installation. Stop and Start your 'Microsoft Search' service for the iFilter to take change.
