COLUMBIASOFT ENABLES DOCUMENT MANAGEMENT OVER CITRIX®

*New options make enterprise-class document management
possible over application virtualization networks using Document Locator®.*

Portland, Ore. – May 15, 2008 – ColumbiaSoft, a leading provider of enterprise-class document management, announced today that it has developed a new package for its Document Locator software that makes it easy to deploy document management services across application virtualization networks such as those offered by Citrix Systems.

"Virtualization of applications is a growing trend, and a number of our customers are using technologies like Citrix, VMware, Microsoft's Terminal Services, and others to maximize their software investment by reducing the need for hardware, and to gain new options for remote connectivity," said Scott Zieg, ColumbiaSoft director of engineering. "We can now help our customers extend the same level of document control and collaboration over the virtualized environment as on a traditional server-PC network."

Application virtualization networks allow IT departments to securely deliver applications as a service without the need to install or manage software applications on individual users' computers. Benefits include the ability to manage applications from a central location, the consolidation of technology, greater control and regulatory compliance, simplified business continuity planning, and more flexible workforce mobility and remote access options.

Using Document Locator over a virtualization network means that software installation and configuration for document management application takes place only on the server and is then available to Citrix XenApp (formerly Presentation Server) client computers. The net result is a decrease in the amount of time and effort required to deploy across an enterprise.

ColumbiaSoft offers two options for application virtualization or terminal services deployments:

1. For businesses operating exclusively on a virtualized network, they can deploy Document Locator at the server level and provide full-functionality at the user workstation level.

2.   For businesses operating in a mixed environment (for example using Citrix to provide remote connectivity while continuing to use a traditional network in the office), they can deploy Document Locator across both environments simultaneously.

About ColumbiaSoft Corporation

A private, Portland, Oregon-based company, ColumbiaSoft is the creator of Document Locator–a next-generation enterprise Document Management system. Thousands of information workers use Document Locator to capture, manage, and share paper and electronic documents, e-mail, and faxes–saving costs, increasing productivity, and meeting regulatory compliance requirements. ColumbiaSoft is a Microsoft Gold Certified Partner. For more information, visit http://www.documentlocator.com.
