PRESS RELEASE

HITT CONTRACTING GETS ORGANIZED WITH DOCUMENT MANAGEMENT SOLUTIONS FROM COLUMBIASOFT

ColumbiaSoft's Document Locator and the CRAM Group help
HITT Contracting keep its distributed workforce well structured and informed

Portland, Ore. – January 17, 2008 – ColumbiaSoft, a leading provider of enterprise-class document management software, is powering a new Document Locator® collaboration solution developed by The CRAM Group to keep HITT Contracting Inc.'s employees and partners updated and organized wherever they may be.

In an industry where timeliness and organization are vital to success, HITT Contracting was looking for a way to keep their expanding workforce updated on relevant status and issues for each project. With employees, partners, and clients located across the East Coast, HITT Contracting was also searching for a way to facilitate collaboration among the right people at the right time. The Cram Group, a consulting firm that advises companies on software and implementation strategies, recommended the solution: Document Locator, an enterprise-class document management system.

"Document Locator was clearly the best option for HITT Contracting. They needed a program that would be quick to deploy and easy for employees to learn," said Wes Smith, president of The Cram Group. "Document Locator's intuitive integration with Microsoft Windows, Office Outlook, and other applications made it the obvious choice."

ColumbiaSoft's Document Locator software is now the collaboration platform for HITT Contracting's intranet site. The site, designed by The Cram Group and HITT Contracting, allows more than 700 employees to communicate and stay current on projects through a secure and centralized information portal powered by Document Locator. Managers are able to post news, events, and documents from wherever they are working, and every employee can easily access the latest versions of each file in real time.

Anthony (Tony) Canella, director of network administration at HITT Contracting, said, "Enabling Document Locator throughout the company has not only been a smooth process, but it has

empowered our employees to take ownership of the internal site."

HITT Contracting chose Document Locator due to its ease of use and seamless integration with Microsoft Windows and Office products, and AEC applications. Employees were instantly familiar with the basics of how to use the software given its intuitive integration with familiar applications. Canella said, "We have seen a significant increase in manager-to-manager communication, which ultimately affects productivity and the bottom line of our business, as employees can receive a live update on the status of each project simply by logging on to the intranet."

Document Locator includes specialized capabilities for architecture, engineering and construction (AEC) firms to improve the viewing and management of documents, CAD (computer-aided design) files, and communications. HITT Contracting is one of several examples of how Document Locator has improved team collaboration for an AEC company.
