COLUMBIASOFT ANNOUNCES RELEASE OF DOCUMENT LOCATOR® VERSION 5.3 DOCUMENT MANAGEMENT SYSTEM

Microsoft Windows® 7 compatibility, faster web access using .NET technology, and enhanced integrations with AutoCAD and Brava! top list of enhancements in latest version.

Portland, Oregon – September 14, 2009 – ColumbiaSoft released today its latest version of the Document Locator document management software with new technology and significant changes in architecture that take advantage of the most current innovations in computing. Document Locator version 5.3 marks the ninth major release of the document management system since the company was founded in 1998.

"In addition to new features that improve ease-of-use, this release is a leap forward in terms of the underlying system architecture," said ColumbiaSoft product manager Scott Zieg. "As a Microsoft Front Runner and early-adopter, we're committed to our tradition delivering document management solutions that take advantage of the most current technology."

The release includes significant architectural changes that offer compatibility with the next generation of Microsoft software: Microsoft Windows 7 and Microsoft Windows Server 2008 R2, as well as improved performance, scalability, and new functional improvements.

Document management for Windows 7
Document Locator version 5.3 is designed to work with both the 32-bit and the 64-bit versions of Microsoft Windows 7 and Windows Server 2008 R2, which will arrive on the market soon. Close integration with Microsoft operating systems and software, including Windows Explorer, Office applications, Outlook, and SharePoint, allow users to manage and share files from within applications they are already familiar with and use on a daily basis. This simplifies document management, making it easier for people to adopt document version control, records management, document imaging, email management and other document management practices in their day-to-day business.

.NET Technology Improves Web Access
A new framework for the optional WebTools browser interface uses .NET and java scripting technology to improve web-based document management access in Document Locator version 5.3. The changes mean that people using the Web-browser will see faster performance and experience new design features that make the browser method similar to the Windows-based interface. For

example, it's now possible to import files by drag-and drop in the Web-browser using a new file import process. Other enhancements include a calendar-style date picker, and the ability to customize column views.

Improved integrations with AutoCAD and Brava!
Integrations with AutoCAD and Brava! have been updated in version 5.3. The new AutoCAD integration uses Autodesk's RealDWG technology to speed the performance of CAD file management within the document management system. Integrations with Brava! Enterprise and Brava! Desktop have been updated to support the most recent releases of the mark-up applications.

About ColumbiaSoft Corporation
ColumbiaSoft is a leader in document management solutions designed to enhance efficiency, reduce risk and improve collaboration. Information workers use ColumbiaSoft software to manage and share paper and electronic documents, e-mail, faxes, and other electronic files to save costs, increase productivity, automate business processes, and meet compliance requirements.
