

DL All New Document Locator Desktop

Familiar, Faster, Better

v26 Arriving Early 2026

Early access available now in Release Candidate (RCv25)

Introducing the New Document Locator Desktop, built to evolve with Windows while remaining independent.

The New Document Locator Desktop is a standalone application that delivers the same familiar folder and file usability in a faster, more reliable system. By eliminating deep Windows system hooks, it runs smoothly through every Windows update with fewer conflicts and a more responsive interface. It's designed for speed, reliability, and uninterrupted productivity, allowing you to focus on your work, not your system.

The New Document Locator Desktop arrives in version 26 planned for release in early 2026, and is available for preview now in Release Candidate (RCv25).

• Familiar Structure, Improved Package

Same intuitive folder and file design in a modern, streamlined application.

• Continuity with Performance

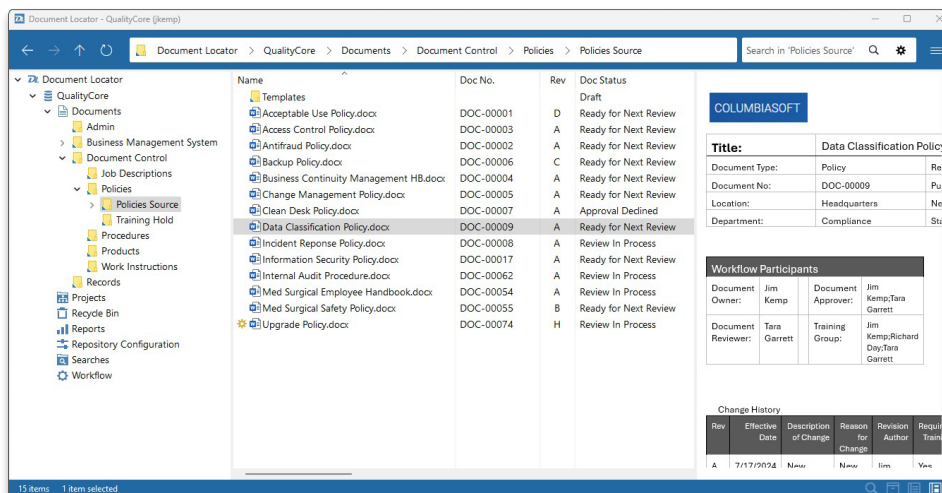

Faster performance, smoother navigation, and fewer slowdowns.

• Stable and Dependable

Resilient through Windows updates in preparation for future editions of Windows.

• Easier to Use, Easier to Support

A reliable experience so your work stays uninterrupted.

The new DL Desktop delivers speed and reliability with the same file and folder design you are already familiar with.

ADDITIONAL UPDATES

Updates in WebTools

- All new modern Dialogs for New Document, Import, Check-in, and Update Profile are added to WebTools and WebTools Desktop.
- Group Manager configuration is added to WebTools and WebTools Desktop.

Support for Microsoft OAuth SMTP

Workflow and notification emails are sent securely through Office 365 without storing passwords, in compliance with modern authentication requirements.

Enhanced Logging

New logging is added for user actions, including login and navigate.

Entra ID

Active Directory Replication Console now includes support for Entra ID (formerly Azure AD), supporting both on premise and cloud Active Directory.

Additional Updates in New Desktop

- Search from file open dialogue.
- Drag files onto files for immediate versioning.
- Improved CoPilot support with OneDrive local path working folder.
- Drag and drop from New Outlook.
